

IT Support Hierarchy & Workflow Document

1. Introduction

This document defines the organizational hierarchy, IT support structure, engineer allocation model, ticket assignment workflow, escalation process, and access control mechanism for the IT Ticketing System.

The purpose of this document is to establish a structured support framework aligned with the existing operational hierarchy across branches, clusters, regions, and states.

The defined structure will help standardize ticket routing, engineer ownership, escalation handling, SLA monitoring, and reporting across all operational locations.

2. Organizational Structure

Based on the operational data shared, the following hierarchy structure is defined.

State

RO / Regional Office

Cluster

Branch

2.1 Hierarchy Levels

Level	Description
State	Top-level operational grouping
RO / Regional Office	Regional operational management
Cluster	Grouping of branches under operational ownership
Branch	Individual operational location

9886 970 483

www.nmit-solutions.com

NMIT Solutions Private Limited

No 214/140/3, Samhita Aspire, 5th Floor, 1st Main, Pai Layout, Doorvaninagar, Bangalore, Karnataka - 560 016

CIN: U72900KA2020PTC133937

3. Operational Coverage Summary

Component	Count
Total States	5
Total Branches	107
Total Clusters	49
ASM	64
RSM	21
ACH	17
RCH	3
TSM	1

4. IT Support Structure

The following IT support hierarchy is defined for operational support and ticket management.

Central IT Admin

Regional IT Manager

Cluster Lead / L2 Engineer

L1 Support Engineer

End User / Branch User

9886 970 483

www.nmit-solutions.com

NMIT Solutions Private Limited

No 214/140/3, Samhita Aspire, 5th Floor, 1st Main, Pai Layout, Doorvaninagar, Bangalore, Karnataka - 560 016

CIN: U72900KA2020PTC133937

5. IT Support Roles & Responsibilities

5.1 L1 Support Engineer

Responsibilities

- Branch-level support activities
- Basic troubleshooting
- Hardware and software support
- Ticket updates and resolution
- End-user coordination

Access Scope

- Assigned branch tickets only
-

5.2 Cluster Lead / L2 Engineer

Responsibilities

- Escalated issue handling
- Advanced technical troubleshooting
- Cluster-level ticket monitoring
- SLA tracking
- Engineer coordination

Access Scope

- All tickets within assigned cluster
-

5.3 Regional IT Manager

Responsibilities

- Regional support operations management
- SLA compliance monitoring
- Escalation management

9886 970 483

info@nmit-solutions.com

NMIT Solutions Private Limited

No 214/140/3, Samhita Aspire, 5th
Floor, 1st Main, Pai Layout,
Doorvaninagar, Bangalore,
Karnataka - 560 016

CIN: U72900KA2020PTC133937

- Resource planning
- Operational reporting

Access Scope

- Region / State-level ticket access

5.4 Central IT Admin

Responsibilities

- System administration
- User and access management
- Configuration management
- Global ticket visibility
- Enterprise-level monitoring

Access Scope

- Complete system access

6. Engineer Allocation Structure

Each IT engineer can be mapped based on the operational hierarchy.

Engineer Mapping Fields

Field	Description
State	Operational state
Region / RO	Regional mapping
Cluster	Cluster allocation
Branch	Branch ownership
Role	Engineer designation
Skill Type	Hardware / Software / Network
Ticket Category	Supported issue categories

Field	Description
Reporting Manager	Escalation reporting structure

7. Ticket Lifecycle Workflow

The following workflow defines the ticket handling process within the system.

Ticket Raised

Branch & Category Identification

State → Region → Cluster → Branch Mapping

Engineer Identification

Auto Assignment

Ticket Acceptance

Issue Resolution

Verification

Ticket Closure

8. Ticket Assignment Logic

Ticket assignment can be performed automatically based on the following parameters.

Assignment Parameters

- Branch Mapping
- Cluster Mapping

- Ticket Category
- Engineer Skill Set
- Engineer Availability
- Ticket Priority
- SLA Configuration
- Engineer Workload

9. Escalation Workflow

The escalation structure is defined as follows.

L1 Support Engineer

Cluster Lead / L2 Engineer

Regional IT Manager

Central IT Admin

Escalation Conditions

Escalation may occur in the following scenarios:

- SLA breach
- Ticket inactivity
- High-priority incidents
- Technical dependency
- Engineer reassignment
- Delayed resolution

Doorvaninagar, Bangalore,
Karnataka - 560 016

CIN: U72900KA2020PTC133937

10. Role-Based Access Control

The system can enforce hierarchy-based access visibility using the following structure.

Role	Access Scope	Visibility
L1 Engineer	Branch Level	Assigned Branch Tickets
Cluster Lead	Cluster Level	All Cluster Tickets
Regional IT Manager	Regional Level	State / Regional Tickets
Central IT Admin	Global Level	All Tickets

11. State & Branch Structure

Telangana (TS)

Adoni, Nalgonda, Khammam, Wanaparthi, Karimnagar, Medak, Siddipet, Nizamabad, Mahbubnagar, Hyderabad

Maharashtra (MH)

Ahmednagar, Aurangabad, Chhatrapati Sambhajnagar, Pune, Nagpur, Latur, Nanded, Solapur, Kolhapur, Satara, Jalna

Tamil Nadu (TN)

Anekal, Hosur, Salem, Erode, Coimbatore, Madurai, Trichy, Tirunelveli, Vellore, Chennai

Karnataka (KA)

Anantpur, Ballari, Belgaum, Bengaluru, Davangere, Hubli, Kolar, Mangalore, Mysore, Raichur, Shimoga, Tumkur

Andhra Pradesh (AP)

Guntur, Kadapa, Kakinada, Kurnool, Nellore, Ongole, Rajahmundry, Srikakulam, Tirupati, Vijayawada, Visakhapatnam

12. Operational Benefits

Implementation of the above structure provides:

- Structured engineer ownership
- Faster ticket assignment
- Improved SLA compliance.
- Centralized monitoring
- Controlled access visibility
- Better escalation management
- Improved accountability
- Scalable operational support model

13. Confirmation Requirements

The following items require confirmation before implementation finalization.

Hierarchy Confirmation

- State → RO → Cluster → Branch structure
- RO hierarchy definition
- Cluster ownership structure

Engineer Mapping Confirmation

- Branch-wise engineer mapping
- Cluster-wise support ownership
- Multi-branch engineer allocation
- Cross-region support access

Workflow Confirmation

- Ticket assignment rules
- SLA escalation workflow
- Support category segregation

Access Confirmation

- Branch-level visibility restrictions

- Regional access permissions
 - Reporting hierarchy approval
-

14. Conclusion

The hierarchy and workflow structure defined in this document establish a centralized and scalable IT support management framework aligned with the organization's operational structure.

The finalized structure will be utilized for:

- Ticket routing
- Engineer assignment
- SLA management
- Escalation handling
- Access control
- Operational reporting
- Support governance

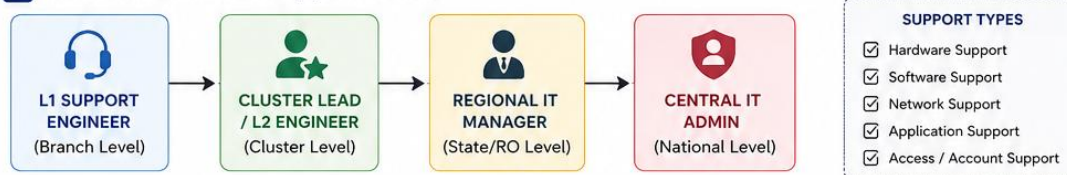

Further implementation activities will proceed based on the finalized hierarchy confirmation and workflow approvals.

BRANCH HIERARCHY & IT SUPPORT FLOW DIAGRAM

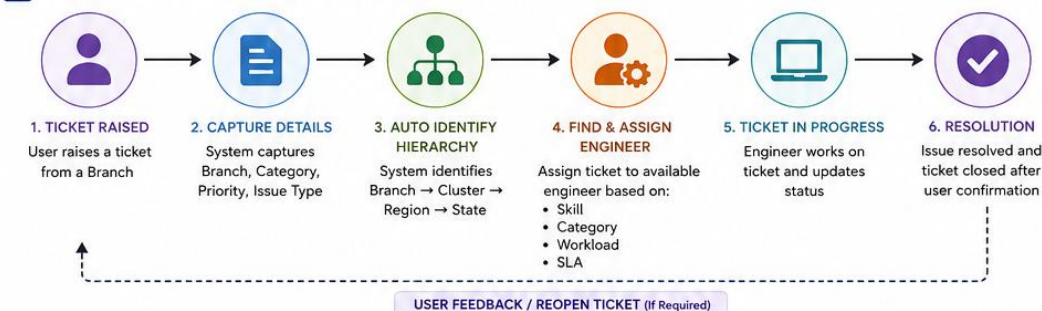

1 BUSINESS HIERARCHY (Operational Structure)

2 IT SUPPORT HIERARCHY (Support Structure)

3 TICKET LIFECYCLE & ASSIGNMENT FLOW

4 ESCALATION FLOW

5 ENGINEER CREATION & MAPPING FLOW

ENGINEER ACCESS LEVEL		TICKET ASSIGNMENT LOGIC		KEY BENEFITS		HIERARCHY SUMMARY	
	Branch Engineer	Own Branch Tickets	☒ Based on Branch / Cluster	☒ Faster Ticket Assignment	☒ Better Accountability	States	5
	Cluster Engineer	All Branches in Cluster	☒ Based on Ticket Category	☒ Structured Escalation	☒ Improved SLA Compliance	Branches	107
	Regional Manager	All Branches in State/RO	☒ Based on Engineer Skill	☒ Clear Visibility & Reporting		Clusters	49
	Admin	All States / All Tickets	☒ Based on Workload			ASM	64
			☒ Based on SLA / Priority			RSM	21
						ACH	17
						RCH	3
						TSM	1
