

Task Management Application

Workflow & System Overview

1. Overview

This document explains how the Task Management Application works, including its structure, user roles, and key processes.

The application helps organizations manage their daily work in an organized and secure way. It allows different types of users to collaborate, assign tasks, track progress, and handle support requests.

The system follows a structured model:

- A **Super Admin** manages multiple Admin accounts
- Each **Admin** manages their own team, projects, and activities
- Data is strictly separated, so one Admin cannot see another Admin's data

The platform supports:

- Task and project management
- User access control
- Approval processes
- Notifications and communication
- IT support and issue handling

2. Administrative Structure

- The **Super Admin** creates and manages Admin accounts
- Each **Admin** works independently within their own setup
- Admins manage:
 - Users
 - Departments
 - Projects
 - Tasks
 - Work processes

All activities are limited to the Admin's own setup to maintain privacy and control.

3. User Roles & Responsibilities

Super Admin

- Manages all Admin accounts
- Monitors overall application activity
- Controls system-level settings
- Reviews reports and activity logs
- Manages IT Support users

Admin

- Manages users and assigns roles
- Sets up departments and work processes
- Creates and manages projects
- Assigns and monitors tasks
- Handles approvals
- Generates reports

Manager

- Creates and manages projects
- Assigns tasks to team members
- Tracks progress and performance
- Coordinates with teams
- Participates in approvals

Employee

- Works on assigned tasks
- Updates progress and timelines
- Communicates with team members
- Uploads and manages related documents

IT Support

- Handles support requests (tickets)
- Resolves technical issues
- Maintains help documentation

CIN: U72900KA2020PTC133937

- Identifies root causes of problems
- Records solutions for future use
- Manages escalations

4. Login & Access Control

Login Process

- User enters login details
- System verifies the information
- User is logged in securely
- User is taken to their dashboard
- Access is provided based on their role

Session Management

- User remains logged in securely
- Session expires after inactivity
- Automatic logout happens when needed

Access Control

- Only logged-in users can access the system
- Each user can only access allowed features
- Access is controlled based on user role

5. Core Workflows

5.1 Admin Setup

Super Admin → Create Admin → Setup Departments → Add Users → Start Operations

5.2 User Onboarding

Admin → Add User → User Logs In → Completes Profile

5.3 Project Management

Admin/Manager → Create Project → Add Team → Define Tasks → Set Deadlines → Track Progress

5.4 Task Management

Create Task → Assign Task → Work on Task → Review → Complete Task → Reassign (if needed)

5.5 Approval Process

Request Raised → Manager Reviews → Approve or Reject → Notification Sent → Status Updated

5.6 System Monitoring (Future Enhancement)

Super Admin → Reviews Activities → Checks Reports → Ensures smooth functioning

5.7 IT Support Process

Issue Reported → Ticket Created → Assigned → Investigated → Resolved → Closed → Feedback Collected

Additional activities include:

- Updating help documents
- Recording solutions
- Identifying root causes
- Improving processes over time

6. Data Handling

- Information is organized into different sections such as users, tasks, projects, and notifications
- Each section manages its own data
- Data is loaded based on user access
- Only relevant information is shown to each user

7. Real-Time Updates

- Users receive instant notifications
- Task updates are reflected immediately
- Chat and communication happen in real time

8. Business Processes

Task Lifecycle

Creation → Assignment → Work → Review → Approval → Completion

Project Lifecycle

Planning → Team Setup → Task Creation → Execution → Review → Completion

User Management

User Creation → Setup → Role Assignment → Access Control → Monitoring

Approval Process

Request → Review → Decision → Notification

9. Security Measures

- Secure login application
- Controlled access based on roles
- Strict separation of Admin data
- Protection against unauthorized access
- Safe handling of user inputs

10. Monitoring & Reports

- Tracks application errors
- Monitors application performance
- Records user activity
- Provides reports for business insights

11. Conclusion

This Task Management Application provides a structured and secure way to manage users, tasks, and projects. With clear roles, organized workflows, and built-in support handling, the system ensures smooth day-to-day operations and better team collaboration.
